Dominant Emotion	**-**	**Unknown**

Recommendation: Candidate requires significant improvement before being considered. Speaking pace is well-balanced. Reduce filler words to sound more confident. Better camera positioning would improve visibility.

Detailed Analysis

Video Presentation

Speaking Pace: The candidate received a B grade with a speaking pace of 112 words per minute. While this pace is slightly below the ideal range of 120-150 WPM, it remains acceptable. The slower pace may indicate thoughtful consideration of responses, which is positive. However, increasing the pace slightly could improve overall engagement and energy. Practice with timed responses can help achieve a more optimal delivery speed.

Confidence: The candidate received a F grade with low confidence at 33%. The candidate appeared notably nervous, which affected their overall presentation quality. The dominant unknown emotion indicates significant discomfort during the interview process. Low confidence may stem from lack of preparation, unfamiliarity with the topic, or general interview anxiety. Mock interviews, thorough preparation, and building subject matter expertise could significantly boost confidence.

Face Visibility: The candidate received a D grade with poor face visibility at 33%. The candidate was frequently off-camera or had significantly inadequate lighting throughout. Poor face visibility hinders the interviewer's ability to assess expressions and build rapport. Proper camera positioning, adequate lighting, and stable seating are essential for video interviews. Investing time in setting up a proper video interview environment would significantly improve presentation.

Filler Words: The candidate received a C grade with 6 filler words detected during the interview. This frequency may slightly impact the perceived professionalism and polish of verbal communication. Regular use of fillers can make speech sound less confident and more hesitant to listeners. Practicing pauses instead of fillers when thinking can significantly improve speech delivery quality. Conscious effort to slow down and collect thoughts before speaking can reduce filler word usage.

Audio Analysis

Pronunciation: Pronunciation analysis was not available for this recording.

Voice Modulation: Voice modulation analysis was not available for this recording.

Communication Skills

Grammar: Good grammar with a score of 78.25/100. 3 grammatical error(s) were noted, mostly minor. Overall language usage was professional and appropriate.

Vocabulary: Good vocabulary with a score of 75/100. 32 unique words were used, showing decent word variety. Vocabulary level was basic, suitable for most professional contexts.

Sentence Formation: Sentence formation score was 55/100. Average length was 8.62 words with simple complexity. Using more varied sentence structures would improve engagement.

Question-by-Question Breakdown

Q1: Intro Video

Grade: F | WPM: 108 | Duration: 38.2s | Emotion: Neutral

Q2: What makes you perfect for this role

Grade: F | WPM: 115 | Duration: 26.0s | Emotion: Unknown

Q3: Walk me thru your future plans

Grade: F | WPM: 113 | Duration: 25.0s | Emotion: Unknown
